DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it does not commence on a separate sheet following the end of the claims. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 15 is rejected under 35 U.S.C. 102(e) as being anticipated by Power et al.

Re claim 15, Power et al. discloses (Abstract; Figure 19; column 7, lines 15-33; column 13, line 24 - column 14, line 2) a software program for converting an input color image to a color halftone. The software program selects colors from an available set of output primary colors and produces halftone separations for those colors (the term "halftone separation" being understood by one of ordinary skill in the art to refer to a mapping in which each output pixel is associated with a particular halftone color). The result is then used to generate a visible color image (Abstract, lines 22-24).

Art Unit: 2624

Power et al. does not specifically describe the storage of image data or the software program in a memory. In order to execute the Power et al. process, these elements must inherently be stored for at least enough time to finish processing a given image.

Allowable Subject Matter

3. Claims 1-14 are allowed.
4. Claim 16 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter:

Re claims 1, 13, & 16 (and dependent claims 2-12 & 14), the art of record does not teach or suggest the recited situation of a dither function within a two-dimensional partition $P_j(x,y)$.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schramm et al. and Vaswani et al. disclose additional examples of software-controlled multicolor dithering.
